Education

Bachelor of Computer Science

The World Islamic Sciences and Education University, Jordan

- Ranked **1st in cohort**
- Achieved **Excellent (Distinction)** academic standing

Courses

Full Stack Web Development Course – Al Hussein Technical University

Professional Summary

Computer Science Graduate | Backend Software Engineering Intern – Acabes Jordan

- Developed scalable backend systems using Java, Spring Boot, and microservices architecture
- Built RESTful APIs with secure authentication and authorization via Spring Security and OAuth2
- Worked with SQL databases to manage and optimize data operations
- Strong foundation in clean code, OOP, and scalable system design

Technical skills

Languages: Java

Backend: Spring Boot, Spring Security, REST APIs, OAuth2, Java Servlets, JSP

Architecture: Microservices, OOP, SOLID, Clean Code

Databases: SQL (MySQL, Access), NoSQL (basic)

Web: HTML, CSS, JavaScript, JSP

Tools: Git, GitHub, Postman

Professional Experience

- Java Web Development Trainee – Adaptive TechSoft (Amman).
- Developed dynamic web pages using Java, JSP, and Servlets.

- Backend Software Engineering Intern – Acabes Jordan (Amman).
- Implemented CRUD operations and connected user interfaces with SQL databases.
- Applied OOP concepts and backend logic to build reliable web applications.
- Developed and tested RESTful APIs using Java and Spring Boot .
- Worked within microservices architecture for scalable backend systems.
- Implemented authentication and authorization using Spring Security and OAuth2 .
- Integrated SQL databases using JPA and Hibernate .
- Collaborated in an agile, team-based development environment.

Academic & Practical Projects

- Inventory Management System (Backend)

Technologies: Java, Spring Boot, Microservices, JPA, SQL

- Built modular backend services and REST APIs
- Focused on scalability and maintainability.

- Authentication & Authorization Service

Technologies: Spring Boot, Spring Security

- Implemented role-based access control.
- Secured backend endpoints

- Graduation Project – SkyChain (Blockchain-based E-Ticketing System)

Technologies: Node.js, REST APIs, Blockchain, Smart Contracts, SQL

- Developed a secure flight e-ticket booking system that ensures **data integrity, transparency, and ticket authenticity**
- Implemented **blockchain-based snapshot hashing** to prevent unauthorized modification of booking records
- Designed backend APIs for **flight booking, ticket modification, OTP verification, and audit logging**
- Integrated smart contracts to record booking hashes on the blockchain and support ticket verification

Voluntary work

- Event Coordinator – IEEE WISE – Amman, 2025
- Coordinated volunteers and optimized resource allocation ,2025.
- Collaborated with teams to support technical and community events 2025.
- Student at 42 Amman Foundation project-based, peer-to-peer learning ,2024
